

### Artificial Intelligence:

This video deals with Artificial Intelligence (AI) and briefly explain how it works and how it's use in own daily life.

AI makes and recognize patterns and make decision without being programmed specifically it's use in various professions.

AI is a larger world that contain Machine Learning, Neuronal Network, Deep Learning, all of this work are ways of how IA learn.

Machine Learning is a computer that making decision as when we do internet search, face recognition, understand own voice, and else.

IA learn by its experiences that is different than learn step by step. these experiences are data, and data can be images, text or audio.

he makes mistakes and learn about it to improve itself and make decisions and predictions more and more accurate.
